NÖRGRU™

LICENSE TERMS

Last Updated: September 12, 2026

Web version: https://norgru.eu/en/policy/license-terms

1. Scope

These License Terms recognize three Product Editions: Level 1 — Visual, Level 2 — Technical, and Level 3 — Manufacturing.

Level 1 and Level 2 are ordinarily available under the Standard License unless a product page states otherwise. Level 3 is subject to a separately negotiated Manufacturing License.

These License Terms are a concise, user-facing extraction of the principal Digital Content licensing rules in the NÖRGRU Terms of Service. Product-specific pages may establish additional or different license terms.

2. Standard License Grant

The Standard License does not grant manufacturing authorization. This remains true even where Level 1 or Level 2 content is delivered in CAD, NURBS, STEP, IGES, or another technically precise format.

Unless otherwise stated, a purchase grants a non-exclusive, perpetual, worldwide, non-transferable, royalty-free commercial license to use, modify, and integrate the purchased Digital Content into lawful commercial and non-commercial projects.

3. Permitted Uses

Digital Content may be incorporated into rendered images, animations, games, films, television productions, architectural visualizations, interactive media, software applications, simulations, and similar projects.

Buyers may modify, adapt, sculpt, re-texture, or otherwise alter Digital Content to meet project requirements.

Digital Content may be distributed as an embedded, non-extractable component of a compiled software or media product.

4. Prohibited Uses

Manufacturing and physical reproduction: Unless the applicable product page expressly permits it or a separate Manufacturing License grants it, the Standard License does not authorize the Customer to use

Digital Content as the technical basis for manufacturing, commercial physical production, or development of a physical implementation of the represented object.

Buyers may not re-sell, redistribute, sublicense, share, transfer, or upload raw or modified source asset files to third parties or public repositories.

Digital Content may not be packaged as a standalone asset library, stock-media marketplace, 3D asset store, or content generator.

Buyers may not distribute an application or game in a manner that makes source files or raw texture maps easily extractable by end users.

Digital Content may not be used to train generative AI models, machine-learning systems, or automated asset-generation tools without prior explicit written consent from NÖRGRU.

5. License Tiers

Personal License: 1 authorized user.

Indie / Team License: up to 5 authorized users.

Studio / Enterprise License: up to 15 authorized users.

Organizations requiring more than 15 authorized users may negotiate a separate license with NÖRGRU.

6. License Management

Access credentials, files, or license entitlements may not be shared beyond the authorized user limit. The Customer is responsible for maintaining use within the purchased license tier.

7. Ownership

A license is a grant of usage rights, not a transfer of ownership. NÖRGRU and applicable Contributors retain their respective intellectual-property rights in the Digital Content.

8. Termination and Continuing Rights

Where legally permitted, serious breach of these License Terms may result in suspension or termination of license rights. However, mandatory legal rights and any license provisions that expressly survive termination remain unaffected.

Delisting or removal of Digital Content does not retroactively invalidate licenses lawfully granted to Customers before removal, subject to applicable law.

9. Physical Manufacture and Real-World Use

9.1 Product Edition Taxonomy

Level 1 — Visual may contain sophisticated geometry and may be suitable for professional visualization. Level 2 — Technical may contain extensive interiors, mechanisms, assemblies, CAD/NURBS geometry, STEP, IGES, or other technical representations. Neither classification by itself grants manufacturing rights.

9.2 Level 3 — Manufacturing

Level 3 is a controlled transaction. Access to Level 3 Manufacturing Content requires the applicable Manufacturing License Agreement or another express written authorization. The agreement may define development, prototype, manufacturing, commercialization, territory, exclusivity, quantity, confidentiality, technical support, revision, and other rights.

9.3 Delivery of Manufacturing Content

Level 3 Manufacturing Content may be delivered through a secure NÖRGRU portal, authenticated cloud environment, controlled download system, encrypted transfer, physical media, or another agreed method. Credentials are project-specific and do not grant general access to NÖRGRU systems.

Digital models do not constitute manufacturing authorization, engineering certification, safety certification, regulatory approval, or professional engineering advice. Anyone who physically manufactures or reproduces an object represented by Digital Content is responsible for technical safety, legality, compliance, tolerances, materials, and intended use.

10. Responsible and Lawful Use

Nothing in these License Terms permits unlawful conduct, terrorism, unlawful violence, criminal activity, prohibited weapons manufacture, or other unlawful use. Customers remain responsible for ensuring that their use complies with applicable law.

11. Questions

For licensing questions: contact@norgru.eu.

12. NÖRGRU-OWNED CONTENT AND EXTERNAL SALES

NÖRGRU may sell and license its own products through NÖRGRU and through External Distribution Platforms, including third-party marketplaces such as Gumroad, ArtStation, SuperHive, or other platforms selected by NÖRGRU.

NÖRGRU-Owned Content may include 3D assets, Unreal Engine assets, Blender scenes, applications, plugins, software, tools, environments, props, and other digital products.

This section does not alter Contributor ownership or revenue-sharing rights under a separate Contributor Agreement.
