NÖRGRU™

STRATEGIC IP & MANUFACTURING POLICY

Last Updated: September 12, 2026

Public-facing framework for high-value technical content and Level 3 transactions

1. Purpose

This Policy establishes how NÖRGRU distinguishes ordinary Digital Content from technically significant material and how it may transition a project from digital representation toward controlled manufacturing access.

2. Three-Level Product Taxonomy

Level 1 — Visual: A digital representation principally intended for visual use. It may be highly detailed and may use mesh, CAD, NURBS, STEP, IGES, or other formats.

Level 2 — Technical: A more extensive technical representation that may include interiors, assemblies, mechanisms, internal structures, CAD/NURBS geometry, STEP, IGES, or other technical data. It remains a digital-content license and does not by itself authorize manufacturing.

Level 3 — Manufacturing: A separately negotiated transaction involving controlled engineering/manufacturing-oriented material and a Manufacturing License.

3. Format Does Not Determine Rights

File format is not the legal boundary. STEP, IGES, NURBS, native CAD, mesh, or another format may appear in Level 1 or Level 2 where objectively useful for the product. Manufacturing rights arise only where expressly granted.

4. Strategic IP

NÖRGRU may designate certain projects or materials as Strategic IP when they may have significant inventive, technological, proprietary, commercial, or development value. Strategic classification may affect access, disclosure, delivery, pricing, and contracting without changing ownership.

5. Public Disclosure and Project Development

NÖRGRU may publicly display conceptual or visual material for marketing and demonstration. Where a project may contain patentable or trade-secret subject matter, NÖRGRU may limit enabling technical disclosure and seek appropriate intellectual-property advice or protection before publication.

6. Level 3 Access

Level 3 is not an ordinary checkout product by default. A prospective client may be required to submit a request describing the organization, intended application, territory, manufacturing purpose, quantity, requested rights, technical requirements, exclusivity, and other relevant information.

Approval does not itself grant a manufacturing right. A signed Manufacturing License Agreement or other express written authorization is required.

7. Controlled Delivery

Manufacturing Content may be delivered through a secure NÖRGRU client portal, authenticated cloud environment, controlled download, encrypted transfer, physical media, or another appropriate method. Access is project-specific and may be logged and revision-controlled.

8. Engineering Status

NÖRGRU may offer a Level 3 transaction only to the extent that the relevant technical package exists and is suitable for the rights being negotiated. A digital concept is not represented as certified engineering merely because it is highly detailed or CAD-based.

Where engineering validation, testing, certification, regulatory approval, or professional engineering services are required, those matters must be addressed through appropriate qualified professionals and transaction-specific agreements.

9. Commercial Terms

Manufacturing License pricing may reflect the objectively identifiable rights and scope requested, including territory, field of use, exclusivity, duration, manufacturing quantity, commercialization, technical support, documentation, validation, development stage, and other project characteristics. Pricing is not based on the personal identity or perceived wealth of the client.

10. Contributor-Owned Strategic IP

Where a Contributor owns the relevant Strategic IP, NÖRGRU will not represent itself as the owner. A separate written arrangement may be required to authorize NÖRGRU to negotiate or grant manufacturing rights and to define the Contributor's commercial participation.

11. Relationship to Other Documents

This Policy complements the NÖRGRU Terms of Service, License Terms, Contributor Agreement, applicable NDA, and transaction-specific Manufacturing License Agreement. A signed transaction-specific agreement controls the specific rights and obligations of that transaction to the extent permitted by law.

12. NÖRGRU-OWNED PRODUCTS

NÖRGRU may also commercialize its own Strategic IP, engineering content, applications, Unreal Engine assets, Blender scenes, 3D assets, and other products directly or through selected External Distribution Platforms.

This is separate from Contributor-Owned Strategic IP and does not create Contributor rights unless a separate written agreement expressly provides them.
